1. The Plot

You are a mycologist in a world full of fungi. You were living happily with your mom. Until one day, an evil mycologist unleashed the Rank 9 Hollowfication fungus. Your mom was one of its victims, and she fell into a deep slumber state, neither dead nor alive. Her care costs money, and the bill grows each day as her condition is getting worse. Luck is still on your side, you heard about the appearance of another Rank 9 fungus called “Glimpse of Hope”. It was guarded behind the Holy Gate on top of Venerable Peak which opens only for the worthy.

Each day, you gather fungi in Hazy Forest or Venerable Peak, and you can complete the Guild’s bounties in the fortress for gold. Some fungi are very valuable and can be sold for a lot of gold, some give interesting abilities that would help you on your journey.

- Win condition: reach the top of Venerable Peak, unlock the Holy Gate, and Consume the Glimpse of Hope
- Lose condition: leave your mom’s medical bill unpaid for 3 days.
- Fainting will not lose you the game but instead skip to the next day.

2. User’s Controls

Desktop:

- Movement: W/A/S/D or arrow keys
- Interact: E
- Inventory: I
- Equip fungus: hover on the fungus and press 1 - 5
- Consume fungus: once it is equip, press the correspond number
- Using skills: J/K/L

Mobile:

- Movement: using the implemented joystick
- Interact: a prompt will appear once the player is close enough
- Fungi pickup: once the prompt appear, hold the fungus instead of the prompt

- Inventory: a bag icon on the top left of your screen
- Equip fungus: open the inventory and touch the fungus
- Consume fungus: once equip, touch the fungus on the hotbar
- Using skills: touch the skillbar on the bottom right of your screen

3. Game's Features

- You work your way as a beginner mycologist to save your mom from hollowfication.
- After finishing the game, users can enter their name and their records will be saved in the Scoreboard
- There are more than 10 fungi to collect. All of them serve their own purpose with the exception of River of Time fungus (The model is there but the idea was scrapped because I was incapable of making it).
- In Venerable Peak, apart from the enemies, the player will also have to beware of falling rock from the sky.
- There are 7 maps that the player can access: Home, Hazy Forest, Fortress, Guild, Shop, Crossroads, and Venerable Peak.
- You can control the player with WASD or arrow keys, use skill with JKL, and interact with the UI using your mouse.
- The game has physics engine: collisions, knockbacks.
- Rock monsters are introduced on Venerable Peak that are able to ram into players or throw rock to deal damage.
- There is different music for different maps. Interacting with the world also has sound effects.
- Game can be played on both mobile and pc.
- There are menu and settings so players can adjust the music and sound effects volume.
- There is transition effect when entering or exiting a map.
- The game uses Open-Meteo API. Therefore, the weather will be raining, snowing, or clear depending on Lappeenranta's live weather.
- The background music is more intense when enemies are approaching the players.
- When the player's health is below 30%, the screen border will grow red

The game covers almost every requirement. Hence, if there is no bug, I am expecting 35+ points for this project.

4. Tools and Credits

The game used HTML, CSS, and Javascript with Phaser 3.90 library.

- Coding: Visual Studio Code
- Maps: assembled in Tiled
- Arts: Drawn in Aesprite
- Data: Open-Meteo API

Credits:

- Medieval Fortress top-down minigame kit: CraftPix
- Guild hall interior pack: CraftPix
- Sound Effects: Kenney
- “Nature Come” music: Ecrivain, OpenGameArt
- “Stop dreaming about it” music: Ecrivain, OpenGameArt
- “FreeJazz Medley Loop” music: sauer2, OpenGameArt
- Weather data: Open-Meteo

5. AI declaration

I used Claude throughout the project. I typed all the code myself with the assistance of Claude.

- Claude help visualized my plan into a file with deadlines estimation for each part
- Claude explained to me about concepts, guided me on how to use Tiled, Aesprite and gave me code examples.
- Claude showed me how to draw pixel-art. I drawn most of the art: forest, fungi, player, hotbar, inventory, etc. Some of them are AI-generated: lightning, force, statusbar, rock monster spritesheet and the rest are free assets on the Internet.
- The map Fortress and Venerable Peak are heavily inspired by Claude’s example.
- I also use Claude to run thousands of simulations in order to find the best balancing for my game.
